

Machine Task – Nodejs Developer

Task: E-Commerce Cart and Order System

Total Allotted Time: 2 Hours 30 Minutes Only

Required Features

1. Product Catalogue API: CRUD APIs for products (/products):

- POST /products — Create product
- GET /products — List all products
- GET /products/:id — Get single product
- PATCH /products/:id — Update product
- DELETE /products/:id — Delete product

Product fields: name, description, price, stock, images, category, etc.

2. Shopping Cart API

Support both:

- Guest Users (temp ID)
- Logged-in Users (user ID based cart)
- Cart APIs (/cart):
- POST /cart/add — Add item to cart
- PATCH /cart/update — Update quantity
- DELETE /cart/remove/: item Id — Remove item
- GET /cart — View cart

3. Promo Code Application API

- Promo CRUD (/promos):
- POST /promos — Create promo code
- GET /promos/:code — Validate promo
- On applying promo to cart:
- Discount % or fixed discount
- Validate promo expiry, usage limits, min order value

4. Order Creation (Checkout) API

Endpoint: POST /orders/checkout

Steps:

- Validate cart (products in stock or not).
- Apply promo if any.
- Calculate total price.
- Create order record in database.
- Decrease stock from inventory.
- Empty the user's cart after successful **order**.

6. Tech Stack:

1. Node.js with Express.js or NestJS
 2. MongoDB (Mongoose) or PostgreSQL (Prisma/Sequelize)
 3. JWT for user auth
 4. Swagger for API documentation
-

Deliverables:

- Mail “Working code” in GitHub repo or ZIP file to hrcodeverseit@gmail.com
 - Postman Collection
 - .env.sample file
 - README with setup
-

Dos:

- Read instructions carefully
- Write clean and readable code, Test your code,
- Follow the specified tech stack.
- Use browser in case of need.
- Use MongoDB as Database.
- Submit task in given time.

Don'ts:

- Do not use any AI tool.
- Do not use any code from previous or other project or anywhere.

All the best.
